All engine impellers replaced (2025)
Main engine crank batteries replaced (2025)
Main engine carburetors rebuilt (2025)

Produced from 1986-1988, President's 37 Aft cabin (a.k.a. 37 Double Cabin) features two private sleeping cabins, each with plenty of storage, stunning wood cabinetry and teak and holly flooring. The spacious aft cabin has an island queen bed and a private head with separate shower. The forward stateroom has two single berths that can be reconfigured into a double, and a convertible dinette provides addition sleeping capacity if needed. Above decks, you will find a large enclosed aft deck with lots of room for a table and chairs, and a bridge that offers plenty of comfortable seating for passengers and an upgraded adjustable pedestal helm seat.

This 37 President offers exceptional value with a solid fiberglass, epoxy coated bottom, fiberglass grid stringer system and custom aluminum swim platform, all of which means this vessel will be free of any structural issues for many years to come. And say goodbye to frequent generator runs! A lithium battery bank with solar charging system, greatly extends your generator-free cruising time, extends the service life of your generator and improves your overall cruising experience. When you add up the cost of the new canvas system, custom swim platform and interior upgrades, this President 37 becomes one heck of a good deal on a classic aft cabin cruiser. Fall buyer bonus; shrink wrap and winter storage have been prepaid by the current owner.
